Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is a cDNA encoding novel human protein (NHP) known as human kinases share structural similarity with animal kinases. The human kinases share structural similarity with animal kinases. Human kinase cDNA is useful for the detection of mutant human kinases. Human kinase cDNA is useful for the detection of mutant human kinase for streening drugs effective in the treatment of symptomatic or phenotypic screening drugs effective in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of NHP in the body. The NHP in diagnostic assays, for the identification of other cellular gene products related to human kinases, and as reagents in assays for nucleotide sequences are useful for generating mental, biological or products related to human kinases, and as reagents in assays for medical disorders. NHP oligomucleotides are used as probes. The labelled NHP probes are useful for screening human genomic library for identifying within the exons, introns and splica sites that can be used in the products are used to genetically engineer cells in vivo that functions as body. Nucleotide constructs encoding MHP bioreactors in the body delivering a continuous supply of NHP to the body delivering a continuous supply of the medulation of NHP expression
                                                                                                                                                                                                                                                                                                                                                            ö

as human kinase. The human kinases share structural similarity with animal kinases, more particularly serine or threonine protein kinases. Human kinase of the detection of mutant human kinase for the diagnosis of disease, and also as a therapeutic. It is useful for the diagnosis of disease, and also as a therapeutic. It is useful for screening drugs effective in the treatment of symptomatic or phenotypic malifestations perturbing the normal function of NHP in the body. The NHP nucleotide sequences are useful for generation of antibodies, as reagents in diagnostic assays, for the identification of other cellular gene products related to human kinases, and as reagents in assays for screening compounds that are useful for treating mental, biological or screening compounds that are useful for treating mental, biological or medical disorders. NHP oligonucleotides are used as probes. The labelled NHP probes are useful for screening human genomic library for identifying colymorphisms and as primers in amplification assays to detect mutations within the exons, introns and splice sites that can be used in diagnostics and pharmacogenomics. Nucleotide construct encoding NHP to the body delivering a continuous supply of NHP to the body. Nucleotide constructs encoding functional NHPs are used in gene therapy for the modulation of NHP expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           300

The human kinases share structural similarity with animal kinases, more particularly serine or threonine protein kinases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /*tag= a

the diagnosis of disease, and also as a therapeutic. It is useful for the diagnosis of disease, and also as a therapeutic. It is useful for secreening drugs effective in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of NHP in the body. The NHP in diagnostic assays, for the identification of other cellular gene products related to human kinases, and as reagents in assays for screening compounds that are useful for treating mental, biological or medical disorders. NHP oligonucleotides are used as probes. The labelled NHP probes are useful for screening human genomic library for identifying polymorphisms and as primers in amplification assays to detect mutations within the exons, introns and splice sites that can be used in diagnostics and pharmacogenomics. Nucleotide construct encoding NHP products are used to genetically engineer cells in vivo that functions as bioreactors in the body delivering a continuous supply of NHP to the continuous continuous encoding need to the continuous continuous continuous in gene therapy for the modulation of NHP expression

New isolated human kinase polynucleotide useful for generating antibodies, as reagents in diagnostic assays and for screening for compounds useful for treating mental, biological or medical diseases. New isolated human kinase polynucleotide useful for antibodies, as reagents in diagnostic assays and for

Disclosure; Page 29~30; 38pp; English.

for The present sequence is a cDNA encoding novel human protein (NHP) known as human kinase. The human kinases share structural similarity with animal kinases, more particularly serine or threonine protein kinases. Human kinase cDNA is useful for the detection of mutant human kinase for the diagnosis of disease, and also as a therapeutic. It is useful for 900 804 960 864

screening drugs effective in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of NHP in the body. The NHP nucleotide sequences are useful for generation of antibodies, as reagents in diagnostic assays, for the identification of other cellular gene products related to human kinases, and as reagents in assays for screening compounds that are useful for treating mental, biological or medical disorders. NHP poligonocleotides are used as probes. The labelled polymorphisms and as primers in amplification assays to detect mutations within the exons, introns and splice sites that can be used in diagnostics and pharmacogenomics. Nucleotide construct encoding NHP products are used to genetically engineer cells in vivo that functions as bioreactors in the body delivering a continuous supply of NHP to the body. Nucleotide constructs encoding functional NHPs are used in gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180

Ding SR;

treatment of cancer, immune disorder, growth and developmental disorder, cardiovascular disorder and lipid disorder.

Page 183; 196pp; English. Claim 5;

The present invention relates to an isolated human kinase polypeptide (PKIN) or a biologically active/immunogenic fragment of PKIN. PKIN is useful for diagnosing, treating and preventing acancer (e.g., leukaemia, Immune disorder (e.g., acquired immunodeficiency syndrome (AIDS), Addison's disease, allergy, anaemia, asthma, Crohn's disease, rheumatoid arthritis, a growth and developmental disorder (e.g. syndrome), a cardiovascular disorder (e.g., atherosclerosis, hypertension, myocardial confaction), and a lipid disorder (e.g., fatty liver, cholestasis, Gaucher's disease, Niemann-Pick's disease). PKIN is useful in a number of drug screening techniques and to analyse the proteome of a tissue or cell type. PKIN is useful for creating knockin humanised animals or transgenic animals to model human diseases, in somatic or generate a transcript image of a tissue or cell type, for detecting differences in the chromosomal location due to translocation, inversion, etc., among normal, carrier or affected individuals, and as hybridisation probes for mapping naturally occurring genomic sequences. PKIN is useful to suchern or northern analysis, dot blot or other membrane-based continued immunosorbent (ELISA)-like assays and in microarrays utilising fluids or tissues from pattients to odecet altered PKIN expression. The present sequence is human PKIN-10 cDNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAS06701-AAS06757 encode for novel human protein kinases #1-57. The novel protein kinases have been identified as members of the tyrosine or scrine/threonine kinase (PTK and STK) families. The polymucleotides encoding protein kinase and the polypeptides may be used in the prevention, diagnosis and treatment of disease associated with impapropriate kinase expression. For example, they may be used to treat cancers (especially cancers of haematopoletic origin), cardiovascular disease (e.g. atherosclerosis), metabolic disorders (e.g. diabetes), immune related diseases (e.g. rheumatoid arthritis), neurological disorders (e.g. clisophrenia), neurodegenerative disorders (e.g. parkinson's disease), inflammatory disorders (e.g. asthma), infectious disease (e.g. HIV) and reproductive disorders (e.g. infertility). Additionally, polymucleotides encoding protein kinases may be used for gene therapy and as DNA probes in disponstic assays. The protein kinase polypeptides may be used as antigens in the production of antibodies against the protein kinases and in assays to identify modulators of protein kinase expression and activity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence encodes a novel human protein (NHP) which is a human kinases. A polymorphism was identified in the 3' UTR of the present sequence. The human kinases share structural similarity with animal kinases. More particularly serine or threenine protein kinases. Human kinase cDNA is useful for the detection of mutant human kinase for the diagnosis of disease, and also as a therapeutic. It is useful for screening drugs effective in the treatment of Symptomatic or phenotypic manifestations perturbing the normal function of NHP in the body. The NHP conclective sequences are useful for generation of antibodies, as reagents in micleotide sequences are useful for generation of other cellular gene products related to human kinases, and as reagents in assays for screening compounds that are useful for treating mental, biological or screening disorders. NHP oligonucleotides are used as probes. The labelled NHP probes are useful for screening human genomic library for identifying polymorphisms and as primers in amplification assays to detect mutations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   within the exons, introns and splice sites that can be used in diagnostics and pharmacogenomics. Nucleotide construct encoding NHP products are used to genetically engineer cells in vivo that functions as bioreactors in the body delivering a continuous supply of NHP to the body. Nucleotide constructs encoding functional NHPs are used in gene therapy for the modulation of NHP expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GGAGTGATCAAAAGCGTATTATGGCAAACACTTCAAGCTCTTAATTTCTGTCATATACAT 360

New human kinases and phosphatases, useful for diagnosing, treating or preventing atherosclerosis, hypertension, AIDS, allergy, multiple sclerosis, osteoarthritis, Alzheimer's disease, Crohn's disease, cancer or hepatitis.

Claim 5; SEQ ID NO 104; 347pp; English.

The invention relates to a novel isolated polypeptide which is a human kinase and phosphatase (KPP). The polypeptide of the invention demonstrates cardiovascular, antiarteriosclerotic, hypotensiave, vasotropic, antiaflammatory, antianginal, antiaflariasion, antiaflammatory, antianginal, antiaflariasion, esteppathic, antiaflate, antiaflabetic, antiaflabetic, antiaflabetic, antiaflabetic, antiathemic, antiparkinsonian, nootropic, antigout, gastrointestinal, neuroprotective, osteopathic, antiarthritic, uropathic, antiparasitic, antiparasitic, antipacterial, virucide, protozoacide and fungicide activities. The kinase and phosphatase (KPP) polynucleotides, polypeptides, agonists and antibacterial, virucide, protozoacide and fungicide activities. The kinase and phosphatase (KPP) polynucleotides, polypeptides, agonists and antibacterial, virucide, protozoacide and fungicide activities. The kinase and phosphatase (KPP) polynucleotides, polypeptides, agonists and alsorders such as cardiovascular diseases, immune system disorders, call diseases, immune system disorders in curological disorders affecting growth and development, cell protozoan or helminthic infections. Furthermore, the molecules of the invention may be useful for creating transgenic animals to model human kep ponna of the invention approaches. KPP cDNA of the invention.

The 14257 protein is a protein kinase that acts as a modulating agent in regulating a variety of cellular processes, including cell proliferation, differentiation, growth and division. The activity of the protein of the invention may be described as, cytostatic, osteopathic; hepatotropic; antidiabetic; neuroprotective; antiarthritic; dermacological; immunosuppressive; antialfammatory; antithyroid; antipsoriatic; ophthalmological; antiallergic; antiatrhyroid; antiatherosclerotic; hypotensive; vasotropic; antiarrhythmic; virucide; anorectic; metabolic; immunomodulator and analgesic. The protein of the

invention may act as a novel diagnostic target or therapeutic agent controlling certain disorders, for example kinase-associated or other 14257-associated disorders. These may include cellular proliferative disorders such as cancers e.g. acute lymphoblastic leukemia or Hodgkin's disease. Other disorders include bone metabolism disorders such as osteoporosis, disorders of the immune system, e.g. inflammatory diabetes mellitus, osteoarthritis and asthma. Proteins of the invention may also be of use as therapeutic agents in cardiovascular disorders such as hypertension and coronary artery disease, and some endothelial cell disorders, including psoriasis. The current sequence represents a human kinase 14257 cDNA

preventing atherosclerosis, hypertension, AIDS, allergy, multiple sclerosis, osteoarthritis, Alzheimer's disease, Crohn's disease, cancer New human kinases and phosphatases, useful for diagnosing, treating or or hepatitis.

Claim 5; SEQ ID NO 94; 330pp; English

The present sequence encodes a human kinase and phosphatase (KPP)

C protein. KPP sequences have cardiovascular, antiarteriosclerotic,

C protein. KPP sequences have cardiovascular, antiarteriosclerotic,

antiallergic, antiasthmatic, immunosuppressive, antithyroid,

antiallergic, antidabetic, nephrotropic, antithyroid, gastrointestinal,

c enuroprotective, osteopathic, antiarthritic, uropathic, ophthalmological,

antirheumatic, antiparkinsonian, nootropic, anticonvulsant, hepatotropic,

CNS, antipsoriatic, hemostatic, cytostatic, antilipsemic, antiparasitic,

antirheumatic, antibacterial, virucide, protozoacide and fungicide

continhelminthic, antibacterial, virucide, protozoacide and fungicide

activities, and can be used in gene therapy, and as kinase modulators mpt

contropicities can be used for diagnosing, treating or preventing disorders

conteaged with aberrant expression of RPP, such as cardiovascular

conteages (alberes melilue), immune system disorders (e.g. AIDS,

allergies, asthma, autoimmune thyroiditis, contact dermatitis, crohn's

disease, diabetes mellitus), immune system disorders (e.g. AIDS,

allergies, pathma, autoimmune thyroiditis, contact dermatitis,

costeoporosis, pancreatitis, Reiter's syndrome, rheumatoid arthritis,

costeoporosis, pancreatitis, Reiter's syndrome, rheumatoid arthritis,

costeoporosis, pancreatitis, neurological disorders (e.g. Alzheimer's

contactive syndrome or uvetis), neurological disorders (e.g. Alzheimer's

contactive syndrome or uvetis), neurological disorders (e.g. cirrhosis,

contactive mixed connective tissue disease, psoriasis or primary

contactive incombocytopenia), cell proliferative disorders (e.g.

The KPP and polymuclectides are also useful in assessing the effects of exogenous compounds on the expression of nucleic acids and kinases and phosphatases, or for facilitating the drug discovery process, including determination of efficacy, dosage, toxicity and pharmacology. The polymuclectides encoding KPP are useful for creating transgenic animals to model human disease. ```
This invention describes a novel disease detection and treatment molecule polypeptide (MDDT) which has anti-inflammatory, immunosuppressive, cateopathic, cytostatic, anti-inflammatory, immunosuppressive, cateopathic, cytostatic, anti-infly, haemostatic, nephrotropic, cateopathic, cytostatic, anti-place of the invention can be used for gene therapy, and the polypeptides of the invention can be used for gene therapy, cretein replacement therapy and are useful for treating a variety of diseases or conditions. These polypeptides or polynuclectides are particularly useful for diagnosing, treating or preventing cell proliferative disorders (e.g. cancers including adenocarcinoma, cell-eukaemia, lymphoma, melanoma, myeloma or sarcoma), anaemia, Crohn's disease, acquired immunodeficiency syndrome (ALDS), Goodpasture's syndromes, inflammation, osteoporosis, thrombocytopaenia, psoriasis or hepatitis. ARX3440-ABM11845, described in the MDDT polypeptides represented in ABU11850-ABM11845, described in the did not form part of the printed specification, but was obtained in electronic format from WIPO at

The nucleic acids and the protein kinases they encode may be used in the treatment and diagnosis of diseases associated with inappropriate kinase expression such as immune-related diseases and disorders, cardiovascular disease.

"Complementary sequences may also be used as DNA probes in diagnostic assays. The kinase polypeptides may be used as antigens in the production of antibodies of kinase expression and activity. Anti-kinase antibodies expression and activity. Diseases related to kinase expression and cardivity. Diseases related to kinase expression and activity. Diseases related to kinase expression and activity include rheumatorid arthrifis, atherosclerosis, autoimmune disorders, camplications of organ transplantation, myocardial infarction, immune disorders, cardiomyopathies, strokes, renal failure, oxidative-stress related disorders, chronic inflammatory bowel disease, chronic inflammatory pelvic disease, multiple sclerosis, asthma, osteoarthritis, periodis, rhinitis, rhinitis, athough especiasis, cancers and reproductive

                                                      AAD03812
                                                                                              The invention relates to a compound comprising a sequence comprising 8-80 base pairs (bp) targeted to a nucleic acid encoding MARK3 (MAP/microtubule affinity-regularing kinase 3), that specifically hybridises with the nucleic acid encoding MARK3 and inhibits expression of MARK3, i.e. is an antisense oligonucleotide (AO). Also included are a composition comprising the compound and a carrier or diluent, inhibiting the expression of MARK3 in cells or tissues, treating an animal having or suspected of having a disease or condition associated with MARK3 and screening for an antisense compound. The antisense oligonucleotide is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            944

The present sequence is a cDNA encoding novel human protein (NHP) known as human kinases. The human kinases share structural similarity with animal kinases, more particularly serine or threonine protein kinases. Human kinase cDNA is useful for the detection of mutant human kinase for the diagnosis of disease, and also as a therapeutic. It is useful for screening drugs effective in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of NHP in the body. The NHP nucleotide sequences are useful for generation of antibodies, as reagents in diagnostic assays, for the identification of other cellular gene products related to human kinases, and as reagents in assays for screening compounds that are useful for treating mental, biological or medical disorders. NHP oligonucleotides are used as probes. The labelled the probes are useful for screening human genomic library for identifying polymorphisms and as primers in amplification assays to detect mutations within the exons, introns and splice sites that can be used in diagnostics and pharmacogenomics. Nucleotide construct encoding NHP products are used to genetically engineer cells in vivo that functions as bloor body. Nucleotide constructs encoding functional NHPs are used in gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        continuous supply of NHP to the functional as continuous supply of NHP to the functional NHPs are used in gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
